

Reading Time

Name _____

Date _____

TMS:02

The clock shown below has a long hand that indicates the **minutes** and a short hand that indicates the **hours**. Between the numbers on the clock there are small lines which correspond to a single minute. So now the space between 1 and 2 is divided into five equal parts.

5:00 or 5 o'clock

The time is 5 o'clock now. The minute-hand is at 12 and the hour-hand is at 5. Now the minute hand moves to 1. So now add five minutes.

We say that the time is **5:05** or **5 minutes past 5**.

Consider the minute hand to be at 3. So now add the minutes. It is $5+5+5$.

We say that the time is **5:15** or **15 minutes past 5**.
