GSL13

Read	each statement	to	find	True /	False	and	circle	the
right	choice.							

1) A line segment has no end points.

True / False

2) Two lines which have a point in common are called intersecting lines.

True / False

3) Lines that do not meet each other and are equidistant are called parallel lines.

True / False

4) A ray has no end points.

True / False

5) The surface of a table is an example of a plane.

True / False

6) Points that do not lie on the same plane are called non-coplanar.

True / False

7) A point has no dimensions.

True / False
