Twin primes & Co-primes

Twin primes:

Prime number pairs which differ from each other by 2 are twin primes. The difference between the numbers is 2.

Example : (3, 5)   (11, 13)   (41, 43) are twin primes.

Co-primes:

Numbers that do not have any common factor other than 1 are called co-prime numbers.

Example : (2, 3)   (3, 4)   (3, 5)   (4, 5)   (17, 23)   (29, 31) are co-primes.
